SEPTEMBER 2025

MMRT NEWSLETTER

THE MCMASTER MARS ROVER TEAM'S MONTHLY NEWSLETTER

OUTREACH UPDATES

This month, our team had the privilege of participating in both **Faculty Fest and Clubs Fest**. These events serve as a cornerstone for student engagement at McMaster as they allow teams and clubs to connect directly to the campus community. Faculty Fest gave us the chance to showcase our rover to incoming students and highlight the interdisciplinary nature of our work and the opportunities available for students across all years and programs. At Clubs Fest, we engaged with many students, sharing our passion for robotics, and encouraged students to apply for our team. Both events were an exciting way to grow our network, build interest in the team, and continue fostering a strong presence within the McMaster community.

RECRUITMENT UPDATES

In addition to our participation in both outreach events, we opened applications across all of our sub-teams, **Business, Electrical, Mechanical, Science, and Software**, in order to provide opportunities for students from diverse academic backgrounds to contribute their skills. Our goal is to welcome passionate and driven students who are eager to gain hands-on experience in engineering design, project management, and interdisciplinary collaboration. This year's recruitment cycle was our most successful as we received **nearly 500 applications** - double the number from last year! We look forward to seeing how our new members help shape the future of our team!
